Bio

Passionate **Flutter Developer** with **5 years of experience** in cross-platform app development and a **total of 7 years in Android development**, specializing in building scalable, high-quality mobile products. Experienced in translating complex product requirements into seamless, performant, and maintainable applications using Flutter, Dart, and modern architecture patterns. Strong focus on user experience, clean code, and continuous improvement — driven by a product mindset and a deep understanding of app lifecycle, performance, and deployment.

SKILLS

- Flutter Development
- React Native Development
- Android Native
- API Development
- Architecting Applications
- Database Structuring

TOOLS

- Android Studio (Android)
- Xcode (iOS)
- VSCode (Editing)
- Git / Github (Versioning)
- PostMan (API Testing)
- Insomnia (API Testing)
- Figma (Designing)
- JIRA (Task manager)
- Anaconda (Python)
- JupyterNB (Editing)
- Azure DevOps (Pipelining)

EXPERIENCES

Wai Technologies Pvt Ltd. – Senior Flutter Developer

Dec 2025 - Present

Pune, India

- Led a team of developers and testers in building and maintaining a logistics application for a USA-based client.
- Designed and maintained the application using the **BLoC architecture**, integrating seamlessly with **.NET backend APIs**.
- Reviewed, refactored, and optimized team code using AI-assisted development tools while ensuring clean, scalable, and maintainable code.
- Conducted code reviews, mentored developers, and coordinated task execution to ensure timely delivery in an Agile environment.
- Collaborated with cross-functional teams to deliver high-performance mobile solutions, troubleshoot complex issues, and improve overall application quality.

Innovizia Technologies Pvt Ltd. – Senior Flutter Developer

Dec 2022 - Aug 2025 (2 years 9 months)

Remote, WFH

- Developed a KIOSK-based attendance management application in Flutter, collaborating with the machine learning team to integrate automated attendance marking and a conference food and beverages ordering system.
- Developed a complete admin and consumer application in Flutter powered by Firebase to support and manage a customer-facing Flutter app.
- Managed client requirements end-to-end — analyzing needs, planning features, delegating backend tasks, and developing frontend UI to deliver precise, expected outcomes.

- Translated Figma UI designs into fully functional Flutter interfaces, enhancing user experience with thoughtful animations and polished UI behavior that remained true to the original design intent.
- Guided team members in designing system architectures and backend interfaces tailored to meet frontend requirements efficiently and scalably.

Evista Solutions – Flutter Developer

Nov 2021 - Nov 2022 (1 year)

Remote, WFH

- Hands-on experience with **GetX** and **Provider** state management in Flutter, implementing efficient and reactive UI updates to enhance app performance and maintainability.
- Optimized network call handling and error management to improve app responsiveness and ensure robust, seamless user experiences.
- Built reusable Flutter widgets and implemented design patterns where necessary to promote code modularity, scalability, and maintainability.
- Developed method channels for native code integration to address specific performance optimization challenges in Flutter apps.
- Integrated payment gateways and implemented push notification services to enhance app functionality and user engagement.
- Built reusable Flutter widgets and implemented design patterns where necessary to promote code modularity, scalability, and maintainability.
- Maintained and contributed to 15–20 Flutter project codebases, ensuring high code quality, bug fixes, and feature enhancements across multiple apps.
- Familiarized with the deployment processes for Android and iOS apps, including publishing to Google Play Store and Apple App Store.

Sri Technocrat – React Native Developer

Oct 2020 - Nov 2021 (1 year 1 month)

Remote, WFH

- Gained hands-on experience in cross-platform mobile app development using the React Native framework, delivering consistent functionality across Android and iOS.
- Developed custom React Native modules and integrated them with native components to extend app capabilities and performance.
- Implemented dynamic Dark and Light theme switching in the app to enhance user accessibility and personalization.
- Also got an opportunity to maintain and improve legacy ASP.NET applications.
- Built and integrated React web app into a .NET application.
- Optimized SQL Server queries for performance and reliability.

Bitwise Inc. – Android Developer

Jul 2018 - Oct 2019 (1 year 3 months)

Pune, India

- Acquired hands-on experience working within Agile development processes, participating in daily stand-ups, sprint planning, and iterative delivery cycles to ensure timely project execution.
- Communicated directly with clients through scheduled calls, using clear and empathetic communication to gather feedback, clarify requirements, and build trust.
- Demonstrated newly implemented application features to clients, providing walkthroughs, addressing feedback, and ensuring alignment with client expectations.
- Designed and developed user interfaces in native Android, focusing on usability, consistency, and performance across various device sizes.
- Integrated RESTful APIs into Android applications, enabling dynamic data exchange, seamless backend communication, and real-time content updates.

EDUCATION

2014-2018 **Pillai HOC College of Engineering and Technology, Mumbai University**

Navi Mumbai, India

Bachelor of Engineering (B.E.) (CGPA 8.5 / 10)

- Awards: Recognised for academic excellence with consistent performance throughout the program and also for best final year project in the department.
- Leadership: Led a team of peers in successfully winning Intra Departmental Final year project competition.

CERTIFICATIONS & OTHERS

Certifications:

1. **Data Science** (Oct 2019 - Mar 2020)
 - Python – Data Analysis which includes working with structured data, creating basic visualization, and data exploration.
 - Pandas – In Python – Handle structured data.
 - Matplotlib *and* seaborn – Visualize data.
 - Numpy, Functions, Web_Scraping and File handling.
2. **Machine Learning** (Jul 2017 - Apr 2018) *via SPRK technologies, Kharghar.*
3. **JAVA Certification** (Feb 2017 - Mar 2018) *via SPRK technologies, Kharghar.*
